allied edge training: *Managing American Hegemony* Kori N. Schake, 2013-09-01 Kori Schake examines key questions about the United States' position of power in the world, including, Why is

the United States' power so threatening? Is it sustainable? Does military force still matter? How can we revise current practices to reduce the U.S. cost of managing the system? What accounts for the United States' stunning success in the round of globalization that swept across the international order at the end of the twentieth century? The author also offers suggestions on what issues the next president should focus to build an even stronger foundation of U.S. power.

allied edge training: *Security* , 2005

allied edge training: Bitskrieg John Arquilla, 2021-06-11 New technologies are changing how we protect our citizens and wage our wars. Among militaries, everything taken for granted about the ability to maneuver and fight is now undermined by vulnerability to “weapons of mass disruption”: cutting-edge computer worms, viruses, and invasive robot networks. At home, billions of household appliances and other “smart” items that form the Internet of Things risk being taken over, then added to the ranks of massive, malicious “zombie” armies. The age of Bitskrieg is here, bringing vexing threats that range from the business sector to the battlefield. In this new book, world-renowned cybersecurity expert John Arquilla looks unflinchingly at the challenges posed by cyberwarfare – which he argues have been neither met nor mastered. He offers fresh solutions for protecting against enemies that are often anonymous, unpredictable, and capable of projecting force and influence vastly disproportionate to their size, strength, or wealth. The changes called for require radical rethinking of military and security affairs, diplomacy, and even the routines of our daily lives.

allied edge training: Allies at Dieppe Will Fowler, 2012-06-20 Set in the context of the Dieppe raid as a whole, Will Fowler studies the contribution of No. 4 Commando and Operation Cauldron. In August 1942, the Allies launched a raid against the German-held port of Dieppe on the French channel coast. It was largely a disaster, with the Canadian forces bearing the brunt of the catastrophe. However, it wasn't all a failure, and history has tended to overlook the role of 4 Commando, who, along with their US Ranger counter-parts, landed and successfully disabled the German guns threatening the rest of the landings. Their actions proved an excellent demonstration of the military adage “train hard, fight easy” and showed the advantage of proper operational planning and brilliant leadership. This controversial raid also included members of the Free French and it was the first time US land forces engaged the Germans on mainland Europe. Allies at Dieppe evaluates how and why they achieved their objectives in this daring Commando raid of World War II.

allied edge training: Allies and Mates Gordon L. Steinbrook, 1995-01-01 Gordon Steinbrook was a young tenderfoot army second lieutenant, commissioned out of college, and newly married, when he received his orders for Vietnam in 1966. At that time the war was rapidly escalating: the United States hoped for a quick resolution of the conflict through massive amounts of American firepower and troop strength. Steinbrook was no ideologue; like so many of his compatriots, he saw Vietnam service as a job to be done, efficiently and quickly, and then home again as soon and as safely as possible. What elevates Steinbrook's account into a special category was his assignment as an artillery forward observer with Australian and New Zealand allied troops. In the American national debate and hand-wringing over the Vietnam War, an often forgotten component of the war is the service of several allied contingents—Koreans, Australians, New Zealanders, Filipinos. The experience of these forces—who often participated in heavy fighting—has not been well reported or studied, not even in the countries that provided the troops. Accounts of the attitudes of these troops toward the war, and toward their ostensible Vietnamese and American allies, are a major contribution of Steinbrook's book. The author has created the account of his experience through a skillful blend of memories and letters home; the result is an engaging and unpretentious depiction of what the war was like for an ordinary young man who saw exceptional service in America's most troubling war.

allied edge training: War Made New Max Boot, 2006-10-19 A monumental, groundbreaking work, now in paperback, that shows how technological and strategic revolutions have transformed the battlefield Combining gripping narrative history with wide-ranging analysis, War Made New

focuses on four revolutions in military affairs and describes how inventions ranging from gunpowder to GPS-guided air strikes have remade the field of battle—and shaped the rise and fall of empires. War Made New begins with the Gunpowder Revolution and explains warfare's evolution from ritualistic, drawn-out engagements to much deadlier events, precipitating the rise of the modern nation-state. He next explores the triumph of steel and steam during the Industrial Revolution, showing how it powered the spread of European colonial empires. Moving into the twentieth century and the Second Industrial Revolution, Boot examines three critical clashes of World War II to illustrate how new technology such as the tank, radio, and airplane ushered in terrifying new forms of warfare and the rise of centralized, and even totalitarian, world powers. Finally, Boot focuses on the Gulf War, the invasion of Afghanistan, and the Iraq War—arguing that even as cutting-edge technologies have made America the greatest military power in world history, advanced communications systems have allowed decentralized, irregular forces to become an increasingly significant threat.

allied edge training: Women in Allied Naval Intelligence in the Second World War Sarah-Louise Miller, 2024-10-17 Closely examining the work of women in the US and British naval services towards Allied naval intelligence during the Second World War, this book focuses on their contributions during the Battle of the Atlantic and Pacific Naval War, in order to shed new light on arenas of war from which women's narratives are almost always absent. Including personal testimonies from those involved, and surveying a wide cross-section of different roles, Sarah-Louise

Miller analyses the work of women at every level and rank in the US and British naval services, and offers a much wider picture of how they assisted the Allied forces behind closed doors. With exploration of the work of the WRNS and WAVES on developing naval intelligence, this book argues that they played a crucial role in the British and American SIGINT systems, and within programs such as those at Bletchley Park and OP-20-G – therefore directly impacting the organisation and outcome of Anglo-American naval efforts. Including analysis of the development of the modern 'kill-chain', Miller also re-evaluates the effect of the 'combat taboo', to demonstrate that the WRNS and WAVES were in fact at the cutting edge of the emergence of modern warfare.

allied edge training: The Warsaw Pact, 1985-1991- Disintegration and Dissolution Matej Bily, 2022-12-30 This book analyzes the last phase of the Warsaw Pact based on unusually large-scale archival research conducted in many countries. Focusing on the changes in the organization's functioning after Mikhail Gorbachev came to power in the Soviet Union, the author examines the role played by the Warsaw Pact in the final stages of the Cold War, as well as exploring the deepening conflicts between individual member states which resulted from the changing international situation and Gorbachev's initiatives to reform the East European state-socialist dictatorships. The book argues that the causes of the rapid dissolution of the Warsaw Pact in the early 1990s were due to many complicated factors, not simply the collapse of communist power in Eastern Europe, factors such as the loss from early in the second half of the 1980s of important internal ties and the failure to create new ties, disputes between individual member states, and the questioning of the overall legitimacy of the organization, which was indispensable for its effective functioning. The book also highlights the impact of external pressures and developments on the international scene. Overall, the book reveals how an apparently robust and solid multilateral organization can so quickly and unexpectedly disappear.
