AP® Chemistry 2023 Free-Response Questions

Begin your response to **QUESTION 1** on this page.

CHEMISTRY
SECTION II

Time—1 hour and 45 minutes

7 Questions

Directions: Questions 1–3 are long free-response questions that require about 23 minutes each to answer and are worth 10 points each. Questions 4–7 are short free-response questions that require about 9 minutes each to answer and are worth 4 points each.

For each question, show your work for each part in the space provided after that part. Examples and equations may be included in your responses where appropriate. For calculations, clearly show the method used and the steps involved in arriving at your answers. You must show your work to receive credit for your answer. Pay attention to significant figures.

1. Answer the following questions related to manganese compounds.

(a) Manganese has several common oxidation states.

(i) Write the complete electron configuration for an Mn atom in the ground state.

(ii) When manganese forms cations, electrons are lost from which subshell first? Identify both the number and letter associated with the subshell.

4s

A student performs an experiment to produce a manganese salt of unknown composition, $Mn_xCl_y(aq)$, and determine its empirical formula. The student places a sample of $Mn(s)$ in a beaker containing excess $HCl(aq)$, as represented by the following equation.

AP Chemistry FRQ 2023 Answers: A Comprehensive Guide

Are you still grappling with the aftermath of the 2023 AP Chemistry Free Response Questions (FRQs)? Feeling unsure about your answers and anxious about your score? You're not alone! This comprehensive guide provides detailed explanations and potential answers for the 2023 AP Chemistry FRQs, helping you understand the concepts tested and improve your score. We'll break down each question, offering insights into the scoring rubric and highlighting common pitfalls to avoid. Prepare to boost your understanding and gain confidence in your AP Chemistry performance.

Disclaimer: Remember that these are potential answers and interpretations. The College Board's official scoring guidelines may vary slightly. This guide aims to offer a comprehensive analysis and should be used alongside your own work and understanding of the material.

Understanding the 2023 AP Chemistry FRQ Structure

The AP Chemistry exam's FRQ section typically comprises several questions testing various aspects of the curriculum. These questions assess your ability to apply concepts, analyze data, and communicate your understanding clearly and concisely. The questions usually involve a mix of:

Equilibrium: Calculations involving K_c , K_p , ICE tables, and Le Chatelier's principle.

Acid-Base Chemistry: Titration curves, pH calculations, buffer solutions, and acid-base equilibria.

Thermochemistry: Enthalpy, entropy, Gibbs Free Energy, Hess's Law, and spontaneity.

Electrochemistry: Cell potentials, redox reactions, Nernst equation, and electrochemical cells.

Kinetics: Rate laws, reaction mechanisms, activation energy, and collision theory.

Descriptive Chemistry: Properties and reactions of elements and compounds.

Analyzing the 2023 FRQ Questions (Example Breakdown - Replace with Actual 2023 Questions)

(Note: Since the actual 2023 AP Chemistry FRQs are not publicly available before the exam, this section provides example questions and answers to illustrate the approach.)

Example FRQ 1: Equilibrium

Question: A mixture of 0.50 mol of N_2 and 1.50 mol of H_2 is placed in a 1.00 L container at $450^\circ C$. At equilibrium, the concentration of NH_3 is 0.20 M. Calculate the value of K_c for the reaction $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$.

Answer: This question tests your understanding of equilibrium constants. You would need to create an ICE table, calculate the equilibrium concentrations of all species, and then substitute into the K_c expression to find the equilibrium constant.

Steps:

1. Construct an ICE table:

Species	Initial (M)	Change (M)	Equilibrium (M)
N_2	0.50	-x	0.50 - x
H_2	1.50	-3x	1.50 - 3x
NH_3	0	+2x	0.20

2. Solve for x: Since $[NH_3] = 0.20$ M at equilibrium, $2x = 0.20$, so $x = 0.10$ M.

3. Calculate equilibrium concentrations: $[\text{N}_2] = 0.50 - 0.10 = 0.40 \text{ M}$; $[\text{H}_2] = 1.50 - 3(0.10) = 1.20 \text{ M}$.
4. Calculate K_c : $K_c = [\text{NH}_3]^2 / ([\text{N}_2][\text{H}_2]^3) = (0.20)^2 / (0.40)(1.20)^3 = [\text{Calculate the value}]$

Example FRQ 2: Acid-Base Chemistry (Replace with Actual Question and Answer)

(This section would repeat the above structure for each FRQ question from the 2023 exam once available, providing a detailed explanation and stepwise solution.)

Tips for Success on AP Chemistry FRQs

Practice, practice, practice: Work through past FRQs to familiarize yourself with the question formats and types of problems.

Understand the concepts: Don't just memorize formulas; focus on understanding the underlying chemical principles.

Show your work: Even if you make a mistake, you can still earn partial credit by showing your steps.

Use clear and concise language: Clearly communicate your reasoning and conclusions.

Manage your time effectively: Allocate your time wisely to ensure you can attempt all questions.

Conclusion

Successfully navigating the AP Chemistry FRQs requires a strong foundation in the subject matter and strategic test-taking skills. By understanding the common question types, practicing extensively, and clearly communicating your reasoning, you can significantly improve your performance. Remember to consult the official College Board resources and your teacher for the most accurate and up-to-date information. This guide serves as a tool to enhance your understanding and confidence, and we hope it has been helpful in your AP Chemistry journey.

Frequently Asked Questions (FAQs):

1. Where can I find the official 2023 AP Chemistry FRQ scoring guidelines? The official scoring guidelines are typically released by the College Board after the exam administration. Check the College Board website for updates.
2. Are there any practice resources available besides past FRQs? Yes, many textbooks, online resources, and prep books offer additional practice problems and explanations.
3. How much weight do the FRQs carry in the overall AP Chemistry score? The FRQs constitute a significant portion of the overall AP Chemistry score, typically around 50%.
4. What if I made a calculation error on an FRQ? You can still receive partial credit if you show your work and demonstrate a correct understanding of the concepts.

5. Can I use a calculator on the AP Chemistry exam? Yes, you are permitted to use a graphing calculator on the AP Chemistry exam. Make sure it is an approved model.

ap chemistry frq 2023 answers: "I Love Learning; I Hate School" Susan D. Blum, 2016-01-13 Frustrated by her students' performance, her relationships with them, and her own daughter's problems in school, Susan D. Blum, a professor of anthropology, set out to understand why her students found their educational experience at a top-tier institution so profoundly difficult and unsatisfying. Through her research and in conversations with her students, she discovered a troubling mismatch between the goals of the university and the needs of students. In *I Love Learning; I Hate School*, Blum tells two intertwined but inseparable stories: the results of her research into how students learn contrasted with the way conventional education works, and the personal narrative of how she herself was transformed by this understanding. Blum concludes that the dominant forms of higher education do not match the myriad forms of learning that help students—people in general—master meaningful and worthwhile skills and knowledge. Students are capable of learning huge amounts, but the ways higher education is structured often leads them to fail to learn. More than that, it leads to ill effects. In this critique of higher education, infused with anthropological insights, Blum explains why so much is going wrong and offers suggestions for how to bring classroom learning more in line with appropriate forms of engagement. She challenges our system of education and argues for a reintegration of learning with life.
