ATI CAPSTONE PHARMACOLOGY ASSESSMENT 2 2019 NGN QUESTIONS WITH 100% CORRECT ANSWERS

CAPSTONE PHARMACOLOGY 2

1. A nurse is caring for a client who reports using the herbal medication garlic along with prescribed warfarin. The nurse should identify that which of the following is a potential adverse effect of taking both of these products concurrently?

- Altered renal perfusion
- Elevated blood pressure
- **Increased ecchymosis** - The nurse should identify that ecchymosis occurs when there is bleeding under the skin. Additionally, the nurse should recognize that, garlic has antiplatelets effects that can result in bleeding. When taken concurrently with an anticoagulant, such as warfarin, there is an increased risk for bleeding.

2. A nurse is providing teaching to a client who is starting to take aspirin. The nurse should instruct the client to monitor for which of the following findings as an adverse effect of this medication?

- **Black, tarry stools** - A client who takes aspirin can have an increased risk for bleeding because aspirin suppresses platelet aggregation. The nurse should instruct the client to monitor for and report indications of bleeding, such as bruising, petechiae, and blood in stools or urine.
- Nystagmus
- Dry mouth

3. A nurse is caring for a client who has an infection and is starting to take gentamicin. Which of the following client laboratory tests should the nurse monitor to detect an adverse effect of the medication?

- B-type natriuretic peptide (BNP)
- **Creatinine** - The nurse should monitor creatinine, BUN and urine output for a client who is receiving gentamicin, an aminoglycoside antibiotic. Gentamicin is an aminoglycoside that has both nephrotoxic and ototoxic adverse effects.
- Amylase level

4. A nurse is assessing a client who has diabetes insipidus and is starting intranasal desmopressin. Which of the following findings should indicate to the nurse that medication is effective?

- The client has clear mucus
- **The client's 24 hr urine output is 1,256 mL** - Desmopressin is effective for the treatment of diabetes insipidus, a disorder of the posterior pituitary gland in which large amounts of dilute urine are produced due to a deficiency in vasopressin. The action of desmopressin causes reabsorption of water and a decrease in urine volume. A urine output of 1,256 mL over 24 hr is within the expected reference range and indicates the medication is effective.

5. A nurse is assessing a client who has a prescription for haloperidol 0.5 mg PO three times

ATI Capstone Pharmacology Assessment 2: Conquer Your Exam with Confidence

Are you facing the daunting ATI Capstone Pharmacology Assessment 2? Feeling overwhelmed by the sheer volume of material? You're not alone! This comprehensive guide is designed to help you navigate the intricacies of this crucial exam, providing effective strategies and insightful tips to boost your confidence and achieve a stellar score. We'll cover key areas to focus on, effective study

techniques, and resources to maximize your preparation. Let's get started!

Understanding the ATI Capstone Pharmacology Assessment 2

The ATI Capstone Pharmacology Assessment 2 is a high-stakes exam that tests your comprehensive understanding of pharmacology principles. Unlike simpler assessments, this exam delves deep into complex drug interactions, mechanisms of action, and patient-specific considerations. Success hinges on more than just memorization; it requires a thorough grasp of the underlying concepts and the ability to apply that knowledge to diverse clinical scenarios.

Key Areas of Focus:

Pharmacokinetics and Pharmacodynamics: This is the cornerstone of pharmacology. Mastering the processes of drug absorption, distribution, metabolism, and excretion (ADME), as well as the relationship between drug concentration and effect, is paramount.

Medication Administration: Understand the various routes of administration (oral, intravenous, intramuscular, subcutaneous, etc.), their implications, and the nursing considerations associated with each. Pay close attention to safe medication administration practices and error prevention strategies.

Common Drug Classes: Familiarize yourself with the major drug classes, their indications, contraindications, adverse effects, and interactions. Pay particular attention to high-alert medications and those commonly used in your clinical setting.

Patient Education: The ATI exam assesses your ability to educate patients about their medications. Practice explaining drug actions, side effects, and proper administration techniques in simple, understandable terms.

Clinical Applications and Case Studies: The assessment heavily emphasizes clinical application. Practice solving case studies that require you to analyze patient data, identify potential drug-related problems, and develop appropriate nursing interventions.

Effective Study Strategies for ATI Capstone Pharmacology Assessment 2

Cramming won't cut it for this exam. A strategic and consistent study plan is essential.

1. Create a Detailed Study Schedule:

Break down the material into manageable chunks and allocate sufficient time for each topic. Prioritize areas where you feel less confident.

2. Utilize Multiple Resources:

Don't rely solely on the ATI materials. Supplement your studies with reputable pharmacology textbooks, online resources, and practice questions from various sources. This multifaceted approach will solidify your understanding.

3. Active Recall and Practice Questions:

Passive reading isn't effective. Actively recall information through flashcards, practice quizzes, and self-testing. Focus on understanding the why behind the concepts, not just the what. The more practice questions you answer, the better prepared you'll be.

4. Seek Clarification:

Don't hesitate to seek clarification from your instructors, classmates, or online forums if you encounter concepts you don't understand. Address knowledge gaps proactively.

5. Simulate the Exam Environment:

Take practice exams under timed conditions to simulate the actual testing environment. This will help you manage your time effectively and reduce exam anxiety.

Leveraging ATI Resources for Success

ATI provides valuable resources to aid in your preparation. Make full use of their practice

assessments, learning modules, and online study tools. Familiarize yourself with the ATI testing platform to minimize any surprises on exam day. Analyze your results from practice tests to identify your weaknesses and focus your study efforts accordingly.

Beyond the Basics: Mastering Difficult Concepts

Some areas of pharmacology can be particularly challenging. Dedicate extra time to understanding complex concepts like:

Drug Interactions: Focus on mechanisms of interaction (e.g., enzyme induction, receptor antagonism).

Pharmacogenomics: Understand how individual genetic variations can affect drug response.

Adverse Drug Reactions: Learn to differentiate between side effects and adverse reactions, and recognize the signs and symptoms of serious adverse events.

Conclusion

Conquering the ATI Capstone Pharmacology Assessment 2 requires dedicated effort and a strategic approach. By employing the study techniques outlined above, utilizing available resources effectively, and focusing on key areas, you can significantly improve your chances of success. Remember, consistent effort, active learning, and a positive mindset are crucial ingredients for achieving your goals.

FAQs

1. What is the passing score for the ATI Capstone Pharmacology Assessment 2? The passing score varies depending on the institution and program. Consult your instructor or program guidelines for specific requirements.
2. Are there specific ATI study materials recommended for this assessment? ATI offers its own review modules and practice exams tailored to the capstone assessment. Supplementing these with other reliable pharmacology resources is highly recommended.
3. How many questions are on the ATI Capstone Pharmacology Assessment 2? The exact number of questions can vary, but expect a substantial number of questions covering a broad range of pharmacology topics.
4. Can I retake the ATI Capstone Pharmacology Assessment 2 if I fail? Retake policies vary

depending on your institution. Check your program's guidelines for details on retake opportunities and any associated requirements.

5. What if I'm struggling with a specific drug class or concept? Utilize online resources like reputable pharmacology websites and textbooks. Consider seeking help from instructors, classmates, or online study groups for clarification and support. Don't hesitate to ask for help—it's a sign of strength, not weakness.

ati capstone pharmacology assessment 2: Farmacology Daphne Miller, 2013-04-16 What can good farming teach us about nurturing ourselves? In *Farmacology*, practicing family physician and renowned nutrition explorer Daphne Miller brings us beyond the simple concept of food as medicine and introduces us to the critical idea that it's the farm where that food is grown that offers us the real medicine. By venturing out of her clinic and spending time on seven family farms, Miller uncovers all the aspects of farming—from seed choice to soil management—that have a direct and powerful impact on our health. Bridging the traditional divide between agriculture and medicine, Miller shares lessons learned from inspiring farmers and biomedical researchers and weaves their insights and discoveries with stories from her patients. The result is a compelling new vision for sustainable healing and a treasure trove of farm-to-body lessons that have immense value in our daily lives. In *Farmacology* you will meet: a vegetable farmer in Washington state who shows us how the principles he uses to rejuvenate his soil apply just as well to our own bodies. a beef farmer in Missouri who shows how a holistic cattle-grazing method can grow resilient calves and resilient children. an egg farmer in Arkansas who introduces us to the counterintuitive idea that sometimes stresses can keep us productive and healthy. a vintner in Sonoma, California, who reveals the principles of Integrated Pest Management and helps us understand how this gentler approach to controlling unwanted bugs and weeds might be used to treat invasive cancers in humans. a farmer in the Bronx who shows us how a network of gardens offers health benefits that extend far beyond the nutrient value of the fruits and vegetables grown in the raised beds. an aromatic herb farmer back in Washington who teaches us about the secret chemical messages we exchange with plants that can affect our mood and even keep us looking youthful. In each chapter, *Farmacology* reveals the surprising ways the ecology of our bodies and the ecology of our farms are intimately linked. This is a paradigm-changing adventure that has huge implications for our personal health and the health of the planet.

ati capstone pharmacology assessment 2: Defining Excellence in Simulation Programs Janice C. Palaganas, Juli C. Maxworthy, Chad A. Epps, Mary E. Mancini, 2014-10-07 An Official Publication of the Society for Simulation in Healthcare, Defining Excellence in Simulation Programs aims to meet the needs of healthcare practitioners using simulation techniques for education, assessment, and research. Increasingly, simulation is an integral part of teaching and training programs in healthcare settings around the world. Simulation models, including virtual simulation, scenario-based simulation with actors, and computerized mannequins, contributes to improved performance and reduced errors in patient care. This text establishes working definitions and benchmarks for the field of simulation and defines the types of simulation programs, while also covering program leadership, funding, staffing, equipment and education models. It provides knowledge critical to the success of simulation program management, simulation educators, and simulation researchers. Written to appeal to the novice to advanced beginner, a special section in each chapter is directed to the competent to expert programs, managers, educators, and researchers, so that this text truly can serve as the comprehensive reference for anyone in simulation.

ati capstone pharmacology assessment 2: Patient Care in Radiography Ruth Ann Ehrlich, Ellen Doble McCloskey, 1989 Patient Care in Radiography helps you acquire and refine both the

technical and interpersonal skills you need to provide quality patient care in the clinical environment. Because patient care is involved in virtually every aspect of imaging, high-quality patient care is just as important as your competent performance of procedures. In Patient Care in Radiography, patient care is integrated with procedural skills throughout the text, ensuring that you know how to provide the best care for every patient you encounter. Skills that are imperative for quality patient care in radiography, such as safety, transfer, and positioning; infection control; and patient assessment are emphasized. You'll find full coverage of introductory topics, as well as key information on microbiology, emerging diseases, transcultural communication, ECGs, administration of medications, and bedside radiography.

ati capstone pharmacology assessment 2: *Oral Cephalosporins* Robert C. Moellering, 1995 This volume provides an excellent survey of the chemistry, microbiology, pharmacology and clinical use of the oral cephalosporins in general and the newer agents in particular. The cephalosporins have long provided satisfactory treatment for many disorders without causing serious side effects; and over the past fifty years forms with different antimicrobial, pharmacologic and toxicologic properties have been developed. Despite the broad spectrum of their activity against a large variety of gram-positive and gram-negative bacteria, the third-generation oral cephalosporins including the prodrug esters do not work against *Pseudomonas aeruginosa*, methicillin-resistant staphylococci, enterococci or *Bacteroides* species. Many, however, are suitable for treating infections of the respiratory and urinary tracts and of the skin and its structure, as well as certain sexually-transmitted diseases. Authors consider other possible uses, against multi-resistant Enterobacteriaceae for instance, but also point out the limitations of the oral cephalosporins. For those working in the fields of infectious disease, bacteriology, chemotherapy, pharmaceuticals and pharmacokinetics, this book is a valuable source of authoritative information.
