capon bridge family practice: White Matter Janet Sternburg, 2015 *White Matter: A Memoir of Family and Medicine* is the story of a Bostonian close-knit Jewish working-class family of five sisters and one brother and the impact they and their next generation endured due to the popularization of lobotomy during the 20th century. When Janet Sternburg's grandfather abandoned his family, and her uncle, Bennie, became increasingly mentally ill, Sternburg's mother and aunts had to bind together and make crucial decisions for the family's survival. Two of the toughest familial decisions they made were to have Bennie undergo a lobotomy to treat his schizophrenia and later to have youngest sister, Francie, undergo the same procedure to treat severe depression. Both heartrending decisions were largely a result of misinformation disseminated that popularized and legitimized lobotomy. Woven into Sternburg's story are notable figures that influenced the family as well as the entire medical field. In 1949, Egas Moniz was awarded the Nobel Prize in Medicine for developing the lobotomy, and in the three years that followed his acceptance of the award, more Americans underwent the surgery than during the previous 14 years. By the early 1950s, Walter Freeman developed an alternate technique for lobotomy, which he proselytized during his travels throughout the country in a van he dubbed the Lobotomobile. The phrase prefrontal lobotomy was common currency growing up in Janet Sternburg's family and in *White Matter* she details this scientific discovery that disconnects the brain's white matter, leaving a person without feelings, and its undeserved legitimization and impact on her family. She writes as a daughter consumed with questions about her mother and aunts—all well-meaning women who decided their siblings' mental

health issues would be best treated with lobotomies. By the late 1970s, the surgical practice was almost completely out of favor, but its effects left patients and their families with complicated legacies as well as a stain on American medical history. Every generation has to make its own medical choices based on knowledge that will inevitably come to seem inadequate in the future. How do we live with our choices when we see their consequences?

capon bridge family practice: *Family Matters* Ann Raina, 2024-01-12 In Fairfax, prominent Judge Ogden Broadwater is shot and killed on the doorstep of his home. capon bridge family practice: *Climate Change and Global Health* Colin D. Butler, Kerry N. Higgs, 2024-07-30 There is increasing understanding that climate change will have profound, mostly harmful effects on human health. In this authoritative book, international experts examine long-recognized areas of health concern for populations vulnerable to climate change, describing effects that are both direct, such as heat waves, and indirect, such as via vector-borne diseases. This lively yet scholarly resource explores all these issues, finishing with a practical discussion of avenues to reform. As Mary Robinson, former UN High Commissioner for Human Rights, states in the

foreword: 'Climate change interacts with many undesirable aspects of human behaviour, including inequality, racism and other manifestations of injustice. Climate change policies, as practised by most countries in the global North, not only interact with these long-standing forms of injustice, but exemplify a new form, of startling magnitude.' This book will be invaluable for students, post-graduates, researchers and policy-makers in public health, climate change and medicine.

capon bridge family practice: Making Healthy Places Andrew L. Dannenberg, Howard Frumkin, Richard J. Jackson, 2012-09-18 The environment that we construct affects both humans and our natural world in myriad ways. There is a pressing need to create healthy places and to reduce the health threats inherent in places already built. However, there has been little awareness of the adverse effects of what we have constructed-or the positive benefits of well designed built environments. This book provides a far-reaching follow-up to the pathbreaking *Urban Sprawl and Public Health*, published in 2004. That book sparked a range of inquiries into the connections between constructed environments, particularly cities and suburbs, and the health of residents, especially humans. Since then, numerous studies have extended and refined the book's research and reporting. *Making Healthy Places* offers a fresh and comprehensive look at this vital subject today. There is no other book with the depth, breadth, vision, and accessibility that this book offers. In addition to being of particular interest to undergraduate and graduate students in public health and urban planning, it will be essential reading for public health officials, planners, architects, landscape architects, environmentalists, and all those who care about the design of their communities. Like a well-trained doctor, *Making Healthy Places* presents a diagnosis of--and offers treatment for--problems related to the built environment. Drawing on the latest scientific evidence, with contributions from experts in a range of fields, it imparts a wealth of practical information, with an emphasis on demonstrated and promising solutions to commonly occurring problems.

capon bridge family practice: *Constructions of Cancer in Early Modern England* Alanna Skuse, 2015-11-11 This book is open access under a CC-BY licence. Cancer is perhaps the modern world's most feared disease. Yet, we know relatively little about this malady's history before the nineteenth century. This book provides the first in-depth examination of perceptions of cancerous disease in early modern England. Looking to drama, poetry and polemic as well as medical texts and personal accounts, it contends that early modern people possessed an understanding of cancer which remains recognizable to us today. Many of the ways in which medical practitioners and lay people imagined cancer - as a 'woman's disease' or a 'beast' inside the body - remain strikingly familiar, and they helped to make this disease a byword for treachery and cruelty in discussions of religion, culture and politics. Equally, cancer treatments were among the era's most radical medical and surgical procedures. From buttered frog ointments to agonizing and dangerous surgeries, they raised abiding questions about the nature of disease and the proper role of the medical practitioner.

Inequalities World Health Organization, 2013 This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy--

capon bridge family practice: Palaeopathology Tony Waldron, 2008-10-20 Palaeopathology is designed to help bone specialists with diagnosis of diseases in skeletal assemblages. It suggests an innovative method of arriving at a diagnosis in the skeleton by applying what are referred to as 'operational definitions'. The aim is to ensure that all those who study bones will use the same criteria for diagnosing disease, which will enable valid comparisons to be made between studies. This book is based on modern clinical knowledge and provides background information so that those who read it will understand the natural history of bone diseases, and this will enable them to draw reliable conclusions from their observations. Details of bone metabolism and the fundamentals of basic pathology are also provided, as well as a comprehensive and up-to-date bibliography. A short chapter on epidemiology provides information on how best to analyze and present the results of a study of human remains.

capon bridge family practice: Let Every Child Be Wanted Phil Harvey, 1999-11-30 This book provides the only comprehensive examination of contraceptive social marketing. It includes a full description of the most important of these programs, documenting a form of international assistance that has attracted over \$1 billion from governments and other donors. The book contains a wealth of previously unpublished material that illustrates this remarkable story. The author challenges the widespread belief that family planning can only be made available through medically-oriented programs and that foreign assistance must be catalytic rather than long-term. *Let Every Child Be Wanted*, with its comprehensive overview, anecdotes and strategies, is a useful handbook for philanthropic agencies, independent charities, and government programs. It will also be valuable for preparing students to work in public health arenas around the world. With a new generation of health workers steeped in social marketing techniques like those offered in this book, tremendous advances can be made in the battle against unwanted pregnancy and AIDS.

capon bridge family practice: Biodiversity and Human Health Francesca Grifo, Joshua Rosenthal, 1997-02-01 The implications of biodiversity loss for the global environment have been widely discussed, but only recently has attention been paid to its direct and serious effects on human health. Biodiversity loss affects the spread of human diseases, causes a loss of medical models, diminishes the supplies of raw materials for drug discovery and biotechnology, and threatens food production and water quality. *Biodiversity and Human Health* brings together leading thinkers on the global environment and biomedicine to explore the human health consequences of the loss of biological diversity. Based on a two-day conference sponsored by the National Institutes of Health, the National Science Foundation, and the Smithsonian Institution, the book opens a dialogue among experts from the fields of public health, biology, epidemiology, botany, ecology, demography, and pharmacology on this vital but often neglected concern. Contributors discuss the uses and significance of biodiversity to the practice of medicine today, and develop strategies for conservation

of these critical resources. Topics examined include: the causes and consequences of biodiversity loss emerging infectious diseases and the loss of biodiversity the significance and use of both prescription and herbal biodiversity-derived remedies indigenous and local peoples and their health care systems sustainable use of biodiversity for medicine an agenda for the future In addition to the editors, contributors include Anthony Artuso, Byron Bailey, Jensa Bell, Bhaswati Bhattacharya, Michael Boyd, Mary S. capon bridge family practice: Sweetness and Power Sidney W. Mintz, 1986-08-05 A fascinating persuasive history of how sugar has shaped the world, from European colonies to our modern diets In this eye-opening study, Sidney Mintz shows how Europeans and Americans transformed sugar from a rare foreign luxury to a commonplace necessity of modern life, and how it changed the history of capitalism and industry. He discusses the production and consumption of sugar, and reveals how closely interwoven are sugar's origins as a slave crop grown in Europe's tropical colonies with its use first as an extravagant luxury for the aristocracy, then as a staple of the diet of the new industrial proletariat. Finally, he considers how sugar has altered work patterns, eating habits, and our diet in modern times. Like sugar, Mintz is persuasive, and his detailed history is a real treat. -San Francisco Chronicle

capon bridge family practice: *The Jevons Paradox and the Myth of Resource Efficiency Improvements* Blake Alcott, Mario Giampietro, Kozo Mayumi, John Polimeni, 2012-04-27 The Jevons Paradox, which was first expressed in 1865 by William Stanley Jevons in relation to use of coal, states that an increase in efficiency in using a resource leads to increased use of that resource rather than to a reduction. This has subsequently been proved to apply not just to fossil fuels, but other resource use scenarios. For example, doubling the efficiency of food production per hectare

over the last 50 years (due to the Green Revolution) did not solve the problem of hunger. The increase in efficiency increased production and worsened hunger because of the resulting increase in population. The implications of this in today's world are substantial. Many scientists and policymakers argue that future technological innovations will reduce consumption of resources; the Jevons Paradox explains why this may be a false hope. This is the first book to provide a historical overview of the Jevons Paradox, provide evidence for its existence and apply it to complex systems. Written and edited by world experts in the fields of economics, ecological economics, technology and the environment, it explains the myth of efficiency and explores its implications for resource usage (particularly oil). It is a must-read for policymakers, natural resource managers, academics and students concerned with the effects of efficiency on resource use.
