Affected by a declared major disaster: This could include hurricanes, earthquakes, wildfires, floods, or other events declared by the President as warranting federal assistance.

Seeking information on disaster assistance programs: Need to know about individual assistance, grants, loans, or temporary housing? This number can guide you.

In need of immediate information regarding a disaster: You're uncertain about evacuation orders, shelter locations, or other critical information. The system can connect you with up-to-date information.

What to Expect When You Call

When you call the FEMA IS 800 number, expect a streamlined process designed to quickly assess your needs. Be prepared to provide:

Your name and contact information: This is crucial for follow-up and aid distribution.

Your insurance information (if applicable): Knowing this can expedite the process of receiving assistance.

Radio: A hand-crank or battery-powered radio is crucial for receiving updates and warnings.

Important documents: Keep copies of essential documents like insurance policies, identification, and medical records in a waterproof container.

Developing an Emergency Plan:

Establish a communication plan: Designate a contact person outside your immediate area.

Identify evacuation routes: Know multiple ways to exit your home and community.

Practice your plan: Regularly practice your plan with your family or household members.

fema is 800 answers: Design Guide for Improving School Safety in Earthquakes, Floods, and High Winds , 2004 This manual is intended to provide guidance for the protection of school buildings and their occupants from natural disasters, and the economic losses and social disruption caused by building damage and destruction. This volume concentrates on grade schools, K-12. This publication covers earthquakes, floods, and high winds. Its intended audience is design professionals and school officials involved in the technical and financial decisions of school construction, repair, and renovations. This publication stresses that identification of hazards and their frequency and careful consideration of design against hazards must be integrated with all other design issues, and be present from the inception of the site selection and building design process. Chapters 1-3 present issues and background information that are common to all hazards. Chapters 4-6 cover the development of specific risk management measures for each of the three main natural hazards. Chapter 1 opens with a brief outline of the past, present, and future of school design. Chapter 2 introduces the concepts of performance-based design in order to obtain required performance from a new or retrofitted facility. Chapter 3 introduces the concept of multihazard design and presents a general description and comparison of the hazards, including charts that show where design against each hazard interacts with design for other hazards. Chapters 4, 5, and 6 outline the steps necessary in the creation of design to address risk management concerns for protection against earthquakes, floods, and high winds, respectively. A guide to the determination of acceptable risk and realistic performance objectives is followed by a discussion to establish the effectiveness of current codes to achieve acceptable performance. A list of acronyms used in the manual are appended. (Contains 13 tables and 124 figures.).
