topic 7 assessment form a: The Governance of Artificial Intelligence in the “Autonomous City” Federico Cugurullo, Tan Yigitcanlar, Xiaoling Zhang, Vincent J. Del Casino Jr., Natalie Marie Gulsrud, Sarah Barns, 2023-10-18 Artificial intelligence (AI) is now mediating, and in some cases seen to be controlling, key urban services and infrastructures, thus becoming a prominent feature of the contemporary city. As portrayed in recent studies, the “autonomous city” can be understood as a city where urban artificial intelligences perform tasks and take on roles

which have traditionally been the domain of humans. At stake in these debates are questions related to the meaning and ongoing role of intelligence, for both humans and machines. While autonomous cars transport people, service robots run shops, drones deliver goods and city brains govern entire cities, humans are redefining the meaning of what “smart” means in the city and what role the human being may play in future urban spaces. With humans shifted to new sectors of the economy or pushed aside by algorithms and robotic agents creating new ways of seeing and governing the city, we raise the question as to whether or not cities are becoming more autonomous from human experience in the sense that their operation does not rely as much on human inputs anymore.

Helen MacGillivray, Brian Phillips, Michael A. Martin, 2014-09-01 The first OZCOTS conference in 1998 was inspired by papers contributed by Australians to the 5th International Conference on Teaching Statistics. In 2008, as part of the program of one of the first National Senior Teaching Fellowships, the 6th OZCOTS was held in conjunction with the Australian Statistical Conference, with Fellowship keynotes and contributed papers, optional refereeing and proceedings. This venture was so successful that the 7th and 8th OZCOTS were similarly run, conjoined with Australian Statistical Conferences in 2010 and 2012. Authors of papers from these OZCOTS conferences were invited to develop chapters for refereeing and inclusion in this volume. There are sections on keynote topics, undergraduate curriculum and learning, professional development, postgraduate learning, and papers from OZCOTS 2012. Because OZCOTS aim to unite statisticians and statistics educators, the approaches this volume takes are immediately relevant to all who have a vested interest in good teaching practices. Globally, statistics as a discipline, statistical pedagogy and statistics in academia and industry are all critically important to the modern information society. This volume addresses these roles within the wider society as well as questions that are specific to the discipline itself. Other chapters share research on learning and teaching statistics in interdisciplinary work and student preparation for futures in academia, government and industry.

topic 7 assessment form a: Mathematics Learning in Early Childhood National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Early Childhood Mathematics, 2009-11-13 Early childhood mathematics is vitally important for young children's present and future educational success. Research demonstrates that virtually all young children have the capability to learn and become competent in mathematics. Furthermore, young children enjoy their early informal experiences with mathematics. Unfortunately, many children's potential in mathematics is not fully realized, especially those children who are economically disadvantaged. This is due, in part, to a lack of opportunities to learn mathematics in early childhood settings or through everyday experiences in the home and in their communities. Improvements in early childhood mathematics education can provide young children with the foundation for school success. Relying on a comprehensive review of the research, Mathematics Learning in Early Childhood lays out the critical areas that should be the focus of young children's early mathematics education, explores the extent to which they are currently being incorporated in early childhood settings, and identifies the changes needed to improve the quality of mathematics experiences for young children. This book serves as a call to action to improve the state of early childhood mathematics. It will be especially useful for policy makers and practitioners—those who work directly with children and their families in shaping the policies that affect the education of young children.

topic 7 assessment form a: *Content Knowledge in English Language Teacher Education* Dário

Luis Banegas, 2020-02-20 Content Knowledge in English Language Teacher Education provides original professional experiences and research accounts of teaching language in the specific context of English language teacher education programmes in diverse international settings, with contributions from Argentina, Australia, Chile, China, Ecuador, Japan, Mexico, the USA and Turkey. The volume focuses on how teacher educators plan and deliver modules which help future teachers understand English as a system and develop English language proficiency. The contributors describe and analyse their professional practices in designing, delivering and evaluating modules or courses on understanding the English language as a system, i.e. content knowledge, exploring the teaching of elements such as phonetics, phonology, grammar, pragmatics, philology, and discourse analysis. In addition, they draw on their vast professional experience to explore how to successfully develop competence and language skills in English so that teachers can become models and proficient users of the language for their students. The contributions range from more historical and functionally linguistic focused chapters to more sociocultural explorations of teaching English to future teachers including interculturality, multilingualism, World Englishes, critical thinking skills, academic writing, and literacy through literature. The accounts shed light on the diverse practices of educators from many different countries, contexts, and cultural and linguistic backgrounds, drawing links between policy and practice, to locate much of English language teacher education and curriculum development outside the so-called 'inner circle' of native English-language speaking contexts, practitioners, and researchers.

topic 7 assessment form a: Exceptional Children Ronald L. Taylor, Les Sternberg, 2012-12-06 Exceptional Children: Integrating Research and Teaching provides a comprehensive introduction to the constantly changing area of special education. The book is research-based, and its title reflects our opinion regarding the important link between research and classroom practice. There is one feature of Exceptional Children: Integrating Research and Teaching that warrants attention and perhaps justification; it was written specifically to address the graduate student or sophisticated undergraduate student market. As such, the book is written at a higher level and with a greater

concept density than typical introductory special education texts. We feel that this type of book is very much needed and will be received favorably by the special education community. There are also several unique features of *Exceptional Children: Integrating Research and Teaching* that we feel will be quite valuable. First, we have emphasized the area of teaching practices and not simply included basic facts about definitions, characteristics, and causes. Although some introductory texts include information about teaching considerations, that area is not discussed as in depth as it is in our text. We feel that it is important that readers not only understand the educational needs of exceptional children, but also can identify the best educational practices to meet those needs.

topic 7 assessment form a: Research Priorities for Airborne Particulate Matter National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Research Priorities for Airborne Particulate Matter, 2004-11-22 In 1997, the U.S. Environmental Protection Agency (EPA) established regulatory standards to address health risks posed by inhaling tiny particles from smoke, vehicle exhaust, and other sources. At the same time, Congress and the EPA began a multimillion dollar research effort to better understand the sources of these airborne particles, the levels of exposure to people, and the ways that these particles cause disease. To provide independent guidance to the EPA, Congress asked the National Research Council to study the relevant issues. The result was a series of four reports on the particulate-matter research program. The first two books offered a conceptual framework for a national research program, identified the 10 most critical research needs, and described the recommended timing and estimated costs of such research. The third volume began the task of assessing initial progress made in implementing the research program. This, the fourth and final volume, gauged research progress made over a 5-year period on each of the 10 research topics. The National Research Council concludes that particulate matter research has led to a better understanding of the health effects caused by tiny airborne particles. However, the EPA, in concert with other agencies, should continue research to reduce further uncertainties and inform long-term decisions.

topic 7 assessment form a: *Strategic Giving* Peter Frumkin, 2008-09-15 The philanthropic landscape is changing dramatically as a new generation of wealthy donors seeks to leave its mark on the public sphere. Peter Frumkin reveals in *Strategic Giving* why these donors could benefit from having a comprehensive plan to guide their giving. And with this thoughtful and timely book, he provides the much-needed framework to understand and develop this kind of philanthropic strategy. After listening for years to scores of individual and institutional funders discuss the challenges of giving wisely, Frumkin argues here that contemporary philanthropy requires a thorough rethinking of its underlying logic. Philanthropy should be seen, he contends, as both a powerful way to meet public needs and a meaningful way to express private beliefs and commitments. He demonstrates that finding a way to simultaneously fulfill both of these functions is crucial to the survival of philanthropy and its potential to support pluralism in society. And he goes on to identify the five essential elements donors must consider when developing a philanthropic strategy—the vehicle through which giving will flow, the way impact will be achieved, the level of engagement and profile sought, the time frame for giving, and the underlying purpose of the gift. Frumkin’s point is that donors must understand strategic giving as the integration of these five critical dimensions to giving. Essential reading for donors, researchers, and anyone involved with the world of philanthropy, *Strategic Giving* provides a new basis for understanding philanthropic effectiveness and a promising new way for philanthropy to achieve the legitimacy that has at times eluded it.
